

GLU-07-CARD: Hypoglycemia Management, Open Cardiac (<70mg/dL)

GLU-07-CARD: (Inverse Measure)
Percentage of adult patients undergoing open cardiac surgery with any intraoperative blood glucose value < 70 mg/dL.

Measure Time Period:
Anesthesia Start to 15 minutes after Anesthesia End

- Considerations:**
- Each blood glucose is evaluated separately.
 - If two blood glucose levels are documented in the same minute, the lower blood glucose will be considered for this measure.
 - If any of the values for a case are considered flagged, the case is flagged. If all values are excluded for a case, case is excluded from the measure.
