

GLU-12: Hypoglycemia Management, Intraop (<70mg/dL)

GLU-12: Percentage of cases with glucose <70mg/dL, treated with administration of dextrose containing solution or glucose recheck within 30 minutes of original glucose measurement.

Measure Time Period:
Anesthesia Start to Anesthesia End.

Anesthesia Start as determined by the **Anesthesia Start Phenotype**.

Anesthesia End as determined by the **Anesthesia End Phenotype**.

- Each blood glucose is evaluated separately.
- If any of the values for a case are considered flagged, the case is flagged. If all values are excluded for a case, case is excluded from the measure. If all values pass for a case, case is passed.

MPOG Dextrose Concepts	
•	Dextrose containing fluids (example: Dextrose 50% or DSLR)
•	Plasmalyte 148 w/Dextrose 5%
•	Total Parenteral Nutrition
•	Peripheral Parenteral Nutrition
•	Glucose Chew Tablet
•	Glucose Gel 40%
